

ShopCentral

Version number: 1.0

Release date: 24th November 2009

Installation Guide

Introduction

This document describes how to install and get started with ShopCentral.

Minimum System requirements

- **You must have access to the web server on which you wish to host ShopCentral.**
- **The web server must support PHP 4.0.0 or higher.**

Getting Started

Overview to installing a Store:

1. **Create a store using the Management Area ShopCentral interface and customise as required.**
2. **Download the store.**
3. **Upload files to your web server.**

ShopCentral Installation

1. **Create a store using the Management Area ShopCentral interface**

Log into your Management Area and visit 'ShopCentral' which is in the Content & Creative section.

To get started, click the 'Create new store' button.

Change the settings and customise your store as required by navigating through the tabs.

Storefront

Create a store for your site in minutes and share millions of low priced merchant products with your visitors to earn commission on purchases.

ShopCentral
your new store builder

Storefront is a simple, dynamic and hassle free store builder that integrates with buy.at's API. It allows you to create a shopping platform that can be customised to complement your site - from its appearance to the products and categories displayed. The end result is a professional looking and user friendly shopping engine designed to engage site visitors and drive sales.

Start by creating your store below or for more information read our [Storefront Install Guide](#).

[Create New Store](#)

Your stores:

Your Shop Title	0.00	24495-affiliate2-53265-99015	Download

[Terms & Conditions](#) | © 2009 Perforce Technologies Limited

Note: You can change these settings later on without having to reinstall your shop just by revisiting the Management Area and saving the changes.

Click 'Save' to commit the changes to your shop.

2. Download the Store

Once your store is created it appears in the list of stores in the Management Area. Next to each store is a download link. Click the download link to acquire a Zip file of your Store and save this to your computer. The download is a .zip file in the standard Zip format. You should extract the contents of the Zip before uploading.

3. Upload Files to Web Server

Once downloaded and extracted you must upload the files to your webserver. The normal way to do this is via FTP. You will need an FTP client to do this.

If you do not already have an FTP client installed, a good choice to use is FileZilla, which is free. You can obtain FileZilla here: <http://filezilla-project.org/download.php>. Download the setup file and run to install the client.

Once you have the FTP client installed you will need to connect to your server. Enter the hostname, username and password into the client.

Click "connect" to join with your server. Once connected, browse to the directory on your server that you want to install the shop.

Browse to the location on your computer that you extracted the zipped files and select all.

Click upload to transfer the files to your server.

Installation is now complete!

Verify installation

In your web browser, visit your site to ensure that your shop is installed correctly.

Changing ShopCentral after Installation

To make changes to your store it's not necessary to edit, download the files and upload again. All you need do is to edit your store using the ShopCentral interface in the Affiliate Management Area and save the changes, and the shop is automatically updated!
